CHILD OR ADOLESCENT COMPREHENSIVE HISTORY AND QUESTIONNAIRE FORMS

The FREE Mental Health Screening Forms contain the Child/Adolescent Comprehensive History and the Child/Adolescent Questionnaire. The information collected in these documents can greatly aid your health care professional in conducting a comprehensive mental health assessment.

While this process may seem like a lot of work, your and your child's participation gives your clinician the information necessary to provide your child with the best diagnostic assessment possible.

The process will require an hour or more of your and your child's time. We realize that some questions may not apply to very young children, such as drug and alcohol use or driving too fast, but please answer as accurately and completely as possible. If you need more space, you can use the back of the assessment forms.

The child and adolescent symptom questionnaire can be filled out, with parental help, by children as young as 5 or 6 years old. Just read the question to your child and fill in the answer. Go slowly, one page or even one-half page at a time. Take frequent breaks. You will be surprised how much your child can tell you.

Some of the questions will seem quite personal; but it is important that they be answered completely. Your health care professionals may wish to share this information with others involved in your child's care. You need to know that they may not release any information about your child without your written permission.

No one has a perfect memory; but do the best you can in answering the questions accurately. It is especially important to have approximate dates for any previous treatment. For any psychiatric medication that has been taken, start and stop dates as well as dosages are needed. Month and year will do in most cases.

Try your best; most clinicians don't expect perfection, but remember that the information you give your clinician determines your child's treatment. You and your child are the most important members of your health care team.

You will notice that the instructions on the questionnaire ask if your child has ever had any of the symptoms listed. Psychiatric symptoms will come and go, so it is important to try to remember if your child has ever had symptoms. After you fill out each page, you and your child should go back through the symptoms and circle the number that corresponds to symptoms your child is presently experiencing.

For example on Page 1, #1 Parent Questionnaire "My child feels discouraged a lot."

If your child/adolescent has ever felt discouraged in the past, you would mark the appropriate box for the degree of difficulty she or he has ever had: **Never, Not at all — Sometimes, Just a little — Often, Pretty much — Frequently, Very much.**

If your child/adolescent is feeling discouraged **at this time**, you would indicate this by **Circling the number 1**. The same is true for each question on every page of both the parent and child/adolescent forms.
